

FHI 360 COMMITMENT SELF-REPORTING QUESTIONNAIRE 2018

EWEC Secretariat, PMNCH, FP2020 self-reporting questionnaire to assess progress on implementation of commitments to the Global Strategy on Women's, Children's and Adolescents' Health.

COMMITMENT PROGRESS SUMMARY NARRATIVE

As of February 2018, FHI 360 has exceeded its US\$3 million financial pledge to FP2020. Since the 2012 London Summit, FHI 360 expended \$3,039,000 of its own resources to support the development and introduction of new high-quality, affordable contraceptives.

With these funds and funding from the Bill & Melinda Gates Foundation, our partner Shanghai Dahua Pharmaceutical Co. Ltd. (Dahua) achieved prequalification from the World Health Organization (WHO) in 2017 for its two-rod contraceptive implant, Levoplant — also referred to as Sino-implant (II). By introducing competition into the contraceptive market, the product has already helped reduce the price of contraceptive implants overall. WHO prequalification will enable Dahua to bring the product to even more women worldwide. FHI 360's financial and program commitments to FP2020 are also reflected in our research on and development of new contraceptive products, including biodegradable implants, longer-acting injectables, microneedle patches, and alternative copper IUD designs. FHI 360's own resources are leveraged with funding from USAID, the Gates Foundation, and the National Institute of Child Health and Human Development.

FHI 360 is leading the Learning about Expanded Access and Potential of the LNG-IUS initiative, a project to generate evidence to determine if and how expanded access to the LNG-IUS could increase contraceptive use and continuation rates in sub-Saharan Africa. This Bill & Melinda Gates Foundation-funded project builds on previous FHI 360 research and advocacy to support the introduction of the LNG-IUS into FP2020 countries.

FHI 360 continues to contribute towards its policy commitment with research, advocacy, and programming. As part of the consortium leading the Evidence for Contraceptive Options and HIV Outcomes (ECHO) Study, FHI 360 is generating crucial data as to whether the use of DMPA increases risk of HIV relative to other contraceptives. The forthcoming evidence, expected in 2019, will support contraceptive decision-making for women at risk of HIV.

We continue to support the generation of evidence on, advocacy for, and programming of task-sharing for family planning. FHI 360 is leading the first randomized control trial of community health worker provision of injectable contraception, with the aim of strengthening the WHO recommendation for this practice. Our research and advocacy also contributed to the recent decision by the Ugandan National Drug Authority to allow private drug shops to administer injectable contraceptives.

FHI 360-led research, published in the *Lancet Global Health*, showed that self-injection of subcutaneous DMPA is safe, effective, and significantly increases contraceptive continuation rates. This research was supported by USAID and the Children's Investment Fund Foundation.

Support for service delivery, including the scale-up of high-impact practices, the integration of family planning into HIV and maternal and child health services, and social and behavioral change communication, is also part of FHI 360's family planning portfolio. Finally, FHI 360 continues to support the development and implementation of national FP Costed Implementation Plans (CIPs). In the past year, we supported the development of a CIP for Zimbabwe and case studies on the CIP experience in Senegal and Tanzania, while also working with FP2020 country focal points on CIP execution.

FINANCIAL COMMITMENT PROGRESS

Has the overall financial support for your commitment changed in value since you last reported or since you made your commitment if this is your first report?

Don't know

Since you made your commitment, how much of your commitment-related budget has been disbursed/spent to-date?

\$303,900

Start date: 2012-10-01

End date: 2018-02-28

Earned revenue: \$303,900

THEMATIC COMMITMENT PROGRESS

Ensure universal access to Sexual and Reproductive Health and Rights (SRHR)

Percentage of women of reproductive age (15-49) who have their need for family planning satisfied with modern methods

Adolescent birth rate (10-14, 15-19) per 1000 women in that age group

Proportion of women aged 15-49 who make their own informed decisions regarding sexual relations, contraceptive use and reproductive health care

Number of countries with laws and regulations that guarantee women aged 15-49 access to sexual and reproductive health care, information and education

Proportion of men and women aged 15-24 with basic knowledge about sexual and reproductive health services and rights

Geographic Coverage. All the geographical levels that you implement your commitment-related activities in?

Global

Geographical Updates. Have you made any changes to the geographical focus of your commitment?

Yes

Sexual and Reproductive Health and Rights Data

Current status: Ongoing

Activities Implemented: FHI 360 implements dozens of activities to ensure sexual and reproductive health and rights. Our work includes contraceptive research, development, and introduction; clinical trials and contraceptive safety and quality assurance; behavior and programmatic research; advocacy and research utilization; support to service delivery; and social and behavioral change communication. A number of these activities are described in the progress report summary narrative.

Results Achieved: Please see the progress report summary narrative for results from a selection of FHI 360's relevant activities. More information is also available from our website: www.fhi360.org.

Country Leadership: Yes

Financing for Health: Yes

Community Engagement: Yes

Quality, Equity and Dignity in Services

Applicable

Quality, Equity and Dignity in Services Data

Current status: Ongoing

Activities Implemented: A number of FHI 360's activities relevant to its FP2020 commitment ensure quality, equity, and dignity in services. This includes our contraceptive product quality assurance work, support to Dahua for the WHO pre-qualification of the Levoplant 2-rod contraceptive implant, and quality improvement activities that support the provision of family planning services in Uganda, Burundi, Kenya, and other countries. These are just some examples of FHI 360's work on quality.

Results achieved: More information is available from our website: www.fhi360.org.

Empowerment of Women, Girls and Communities

Applicable

Empowerment of Women, Girls and Communities Data

Activities Implemented: FHI 360 is a partner on the USAID-funded Passages project, which aims to address a broad range of social norms to achieve sustained improvements in family planning and reproductive health. We also implement a variety of activities related to youth empowerment under the USAID-funded YouthPower Action project, including integrated sexual reproductive health and workforce development interventions and group-based mentoring for adolescent girls covering sexual and reproductive health, financial capabilities, soft skills, and gender content. These are just a few examples of activities implemented by FHI 360 that empower women, girls, and communities.

Results achieved: More information is available from our website: www.fhi360.org.
