# ADVANCING MEASUREMENT IN FAMILY PLANNING

## Centering **Locally-Driven** Family Planning Measurement Priorities in the Global Measurement Agenda

**WE INVITE YOU TO THE FIRST EVENT IN A FAMILY PLANNING MEASUREMENT CONVENING SERIES**, focused on elevating local perspectives in identifying critical family planning measurement challenges and solutions. This event will bring together approximately 50 stakeholders from across Africa, Asia, and Latin America and the Caribbean to discuss national, subnational, and community-based family planning measurement priorities, challenges, gaps, emerging approaches, and technical assistance needs. In our first event, we will:

1. Elevate the leadership of country-based family planning implementers, policy and program decisionmakers, and M&E officers in global family planning measurement discussions.
2. Identify measurement priorities, challenges, lessons learned, and technical assistance needs that resonate across multiple country contexts.
3. Inform an agenda for future thematic family planning measurement convenings.

Interested participants can apply via a short **EXPRESSION OF INTEREST FORM**

Stay tuned for more information about future events in the series.

### About the Series

The [MOMENTUM Knowledge Accelerator](#) project, in collaboration with the [FP2030 Performance Monitoring and Evidence \(PME\) Working Group](#) and the Johns Hopkins Bloomberg School of Public Health, is launching a family planning measurement convening series. The aim of these convenings is to highlight key FP measurement advances that have been effectively operationalized, learn from measurement challenges, and prioritize needs to be addressed.

**JUNE 25–27, 2024**
